IBM Lotus**Live**™ Engage

Working together just got easier

Fast-paced, global markets require that businesses have access to the right information and the right people at the right time – with each interaction giving you a chance to do something better, more efficiently, and more productively.

Sharing information to make smarter business decisions and develop new ideas is no longer a luxury. Communication and collaboration with people inside and outside your company are essential to your success.

Built for business, LotusLive Engage allows you to work smarter, bringing your business network together with essential online collaboration tools easily, in one place, that you can access from any place with a Web browser. And since it's delivered as an online service you can focus your resources on growing your business by allowing us to manage the operational aspects of everyday tools. It provides you with the freedom to allocate your resources and capital to strategic projects in your business.

An integrated suite of Web collaboration and business networking services, LotusLive Engage includes online meetings, events, files, activities, instant messaging and more.

These services give you the ability to build online experiences around a simple Web meeting. Those who attend your online meetings become part of your business network.

Engage with them again and again, in a security-rich environment, using the suite of online collaboration services. Your Web meeting experience is only the beginning.

LotusLive Engage is ideal for businesses looking to collaborate beyond corporate boundaries, expand their networks and discover new business opportunities. If you are looking to work smarter—host online meetings, share your files and work with others in an easy-to-use set up—LotusLive Engage is right for you.
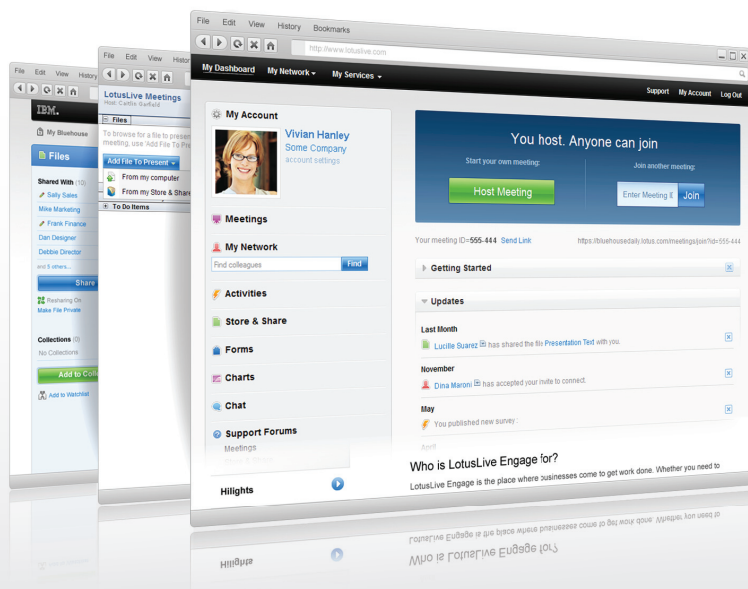

LotusLive Engage delivers the tools:

- Extend the Web meeting experience by developing online communities

- Become more productive focusing on growth and innovation rather than infrastructure.

- Rapidly integrate emerging technologies without the high risk and cost.

- Collaborate quickly and easily beyond the firewall.

Online Services ensure easy access:

- Affordable and accessible

- Low upfront capital investment

- Predictable expenses via monthly & annual subscriptions

- No IT staff required for infrastructure & maintenance

IBM makes the difference:

- IBM Security-rich network

- Credentials-based access and file management

- Built for business, not for advertising. The service is designed to protect your identity, not exploit it.
